Background: The protein encoded by this gene is similar to PPAR-gamma coactivator 1 (PPARGC1/PGC-1), a

protein that can activate mitochondrial biogenesis in part through a direct interaction with nuclear respiratory factor 1 (NRF1). This protein has been shown to interact with NRF1. It is thought to be a functional relative of PPARGC1 that activates mitochondrial biogenesis

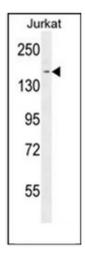

through NRF1 in response to proliferative signals.

Synonyms: PRC, KIAA0595

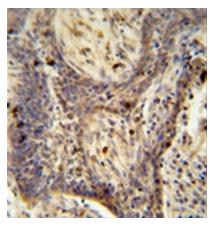

Note: Molecular Weight: 177544 Da

Protein Families: Druggable Genome
