Background:	The SNX2 gene encodes a member of the sorting nexin family. Members of this family contain a phox (PX) domain, which is a phosphoinositide binding domain, and are involved in intracellular trafficking. This protein associates with formin-binding protein 17, but its function is unknown. This protein may form oligomeric complexes with family members.
Synonyms:	TRG9, TRG-9
Note:	<b>Molecular Weight:</b> 58471 Da
