

## Product datasheet for **AP54207PU-N**

### TCRB (Center) Rabbit Polyclonal Antibody

#### Product data:

|                              |                                                                                                                    |
|------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Product Type:</b>         | Primary Antibodies                                                                                                 |
| <b>Applications:</b>         | WB                                                                                                                 |
| <b>Recommended Dilution:</b> | ELISA: 1:1,000.<br>Western blot: 1:100~500.                                                                        |
| <b>Reactivity:</b>           | Human                                                                                                              |
| <b>Host:</b>                 | Rabbit                                                                                                             |
| <b>Isotype:</b>              | Ig                                                                                                                 |
| <b>Clonality:</b>            | Polyclonal                                                                                                         |
| <b>Immunogen:</b>            | KLH conjugated synthetic peptide between 74-102 amino acids from the Central region of human TCRB                  |
| <b>Specificity:</b>          | This antibody detects TCRB (Center).                                                                               |
| <b>Formulation:</b>          | PBS with 0.09% (W/V) sodium azide<br>State: Aff – Purified<br>State: Liquid Ig fraction                            |
| <b>Concentration:</b>        | lot specific                                                                                                       |
| <b>Purification:</b>         | Protein A column followed by peptide affinity purification                                                         |
| <b>Conjugation:</b>          | Unconjugated                                                                                                       |
| <b>Storage:</b>              | Store at 2 – 8 °C for up to six months or (in aliquots) at –20 °C for longer. Avoid repeated freezing and thawing. |
| <b>Stability:</b>            | Shelf life: one year from despatch.                                                                                |
| <b>Database Link:</b>        | <u><a href="#">P04435</a></u>                                                                                      |

**Background:**

The receptors on T cells consist of immunoglobulin like integral membrane glycoproteins containing 2 polypeptide subunits, alpha and beta, of similar molecular weight, 40 to 55 kD in the human. Like the immunoglobulins of the B cells, each T cell receptor subunit has, external to the cell membrane, an N terminal variable domain and a C terminal constant domain. T cell receptors recognise foreign antigens which have been processed as small peptides and bound to major histocompatibility complex molecules at the surface of antigen presenting cells. Each T cell receptor is a dimer consisting of one alpha and one beta chain or one delta and one gamma chain. In a single cell, the T cell receptor loci are rearranged and expressed in the order delta, gamma, beta, and alpha. If both delta and gamma rearrangements produce functional chains, the cell expresses delta and gamma. If not, the cell proceeds to rearrange the beta and alpha loci.

**Synonyms:**

T-cell receptor beta chain V region CTL-L17

**Note:**

**Molecular Weight:** 14999 Da
