

## Product datasheet for **AR09361PU-S**

### Desmin Human Protein

#### Product data:

Product Type:	Recombinant Proteins
Description:	Desmin human recombinant protein, 0.1 mg
Species:	Human
Expression Host:	E. coli
Predicted MW:	53,539
Concentration:	lot specific
Purity:	>95% determined by SDS gelelectrophoresis
Buffer:	Presentation State: Purified State: Lyophilised purified protein Buffer System: 30 mM Tris/HCl pH 8, 9.5 M urea, 2 mM DTT, 2 mM EDTA, 10 mM methylammonium chloride. Reconstitute with 70 µl distilled water (final volume 100 µl)
Preparation:	Lyophilised purified protein
Applications:	Protein standard in 1D and 2D SDS gelelectrophoresis. Immunoassays. Immunization. Protocol: Reconstitution to filaments: after desmin is dissolved in 9.5 M urea buffer (see above), protofilaments and filament complexes are obtained by dialyzing the resulting polypeptide solution stepwise to a concentration of 4M urea and then to low salt condition (50 mM NaCl, 2 mM dithiothreitol, 10 mM Tris-HCl, pH 7.4). For immunization purposes, the solution can be further dialyzed against PBS (phosphate buffered saline, e.g. Dulbecco's PBS).
Protein Description:	Recombinant human desmin
Note:	<u>Isoelectric Point</u> pI 5.16 (calculated from sequence)
Storage:	Prior to reconstitution store at 2-8°C. Following reconstitution store the antibody at -20°C. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
RefSeq:	<u>NP_001918</u>
Locus ID:	1674

<b>UniProt ID:</b>	<u>P17661, Q53SB5</u>
<b>Cytogenetics:</b>	2q35
<b>Synonyms:</b>	CDCD3; CSM1; CSM2; LGMD1D; LGMD1E; LGMD2R
<b>Summary:</b>	This gene encodes a muscle-specific class III intermediate filament. Homopolymers of this protein form a stable intracytoplasmic filamentous network connecting myofibrils to each other and to the plasma membrane. Mutations in this gene are associated with desmin-related myopathy, a familial cardiac and skeletal myopathy (CSM), and with distal myopathies. [provided by RefSeq, Jul 2008]
<b>Protein Families:</b>	Druggable Genome
<b>Protein Pathways:</b>	Arrhythmogenic right ventricular cardiomyopathy (ARVC), Dilated cardiomyopathy, Hypertrophic cardiomyopathy (HCM)
