<b>ORIGENE</b> ASS1 (1-412, His-tag) Human Protein – AR09573PU-L	
Synonyms:	ASS; CTLN1
Summary:	The protein encoded by this gene catalyzes the penultimate step of the arginine biosynthetic pathway. There are approximately 10 to 14 copies of this gene including the pseudogenes scattered across the human genome, among which the one located on chromosome 9 appears to be the only functional gene for argininosuccinate synthetase. Mutations in the chromosome 9 copy of this gene cause citrullinemia. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Aug 2012]
Protein Families:	Druggable Genome
Protein Pathway	<b>s:</b> Alanine, aspartate and glutamate metabolism, Arginine and proline metabolism, Metabolic pathways
