MAPT / TAU (1-352, His-tag) Human Protein - AR09583PU-L

Synonyms: MAPTL, MTBT1, Microtubule-associated protein tau, PHF-tau, Neurofibrillary tangle protein,

Paired helical filament-tau

Summary: This gene encodes the microtubule-associated protein tau (MAPT) whose transcript

undergoes complex, regulated alternative splicing, giving rise to several mRNA species. MAPT

transcripts are differentially expressed in the nervous system, depending on stage of neuronal maturation and neuron type. MAPT gene mutations have been associated with

several neurodegenerative disorders such as Alzheimer's disease, Pick's disease,

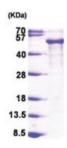

frontotemporal dementia, cortico-basal degeneration and progressive supranuclear palsy.
