	NPL (1-320, His-tag) Human Protein – AR09968PU-L
Summary:	This gene encodes a member of the N-acetylneuraminate lyase sub-family of (beta/alpha)(8)- barrel enzymes. N-acetylneuraminate lyases regulate cellular concentrations of N-acetyl- neuraminic acid (sialic acid) by mediating the reversible conversion of sialic acid into N- acetylmannosamine and pyruvate. A pseudogene of this gene is located on the short arm of chromosome 2. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.
