 UniProt ID:
 Q9Y570

 Cytogenetics:
 11q13.4

Synonyms: ABDH19; PME-1

Summary: This gene encodes a protein phosphatase methylesterase localized to the nucleus. The

encoded protein acts on the protein phosphatase-2A catalytic subunit and supports the ERK pathway through dephosphorylation of regulatory proteins. It plays a role in malignant glioma progression. Alternative splicing results in multiple transcript variants. [provided by
