

Product datasheet for AR50290PU-N

ARMET / ARP (25-182, His-tag) Human Protein

Product data:

Product Type: Recombinant Proteins Description: ARMET / ARP (25-182, His-tag) human recombinant protein, 0.5 mg Species: Human E. coli **Expression Host: Expression cDNA Clone** MGSSHHHHHH SSGLVPRGSH MGSHMLRPGD CEVCISYLGR FYQDLKDRDV TFSPATIENE or AA Sequence: LIKFCREARG KENRLCYYIG ATDDAATKII NEVSKPLAHH IPVEKICEKL KKKDSQICEL KYDKQIDLST VDLKKLRVKE LKKILDDWGE TCKGCAEKSD YIRKINELMP KYAPKAASAR TDL Tag: His-tag Predicted MW: 20.8 kDa **Concentration:** lot specific **Purity:** >90% by SDS - PAGE **Buffer:** Presentation State: Purified State: Liquid purified protein Buffer System: 20 mM Tris-HCl buffer (pH 8.0) containing 1 mM DTT, 10% glycerol, 0.1M NaCl **Preparation:** Liquid purified protein **Protein Description:** Recombinant human MANF protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques. Store undiluted at 2-8°C for one week or (in aliquots) at -20°C to -80°C for longer. Storage: Avoid repeated freezing and thawing. Stability: Shelf life: one year from despatch. <u>NP 006001</u> **RefSeq:** Locus ID: 7873 **UniProt ID:** P55145, A8K878 **Cytogenetics:** 3p21.2 Synonyms: ARMET: ARP

Service ARMET / ARP (25-182, His-tag) Human Protein – AR50290PU-N

Summary:The protein encoded by this gene is localized in the endoplasmic reticulum (ER) and golgi, and
is also secreted. Reducing expression of this gene increases susceptibility to ER stress-
induced death and results in cell proliferation. Activity of this protein is important in
promoting the survival of dopaminergic neurons. The presence of polymorphisms in the N-
terminal arginine-rich region, including a specific mutation that changes an ATG start codon
to AGG, have been reported in a variety of solid tumors; however, these polymorphisms were
later shown to exist in normal tissues and are thus no longer thought to be tumor-related.
