	GCLM / GLCLR (1-274, His-tag) Human Protein – AR50481PU-N
Summary:	Glutamate-cysteine ligase, also known as gamma-glutamylcysteine synthetase, is the first rate limiting enzyme of glutathione synthesis. The enzyme consists of two subunits, a heavy catalytic subunit and a light regulatory subunit. Gamma glutamylcysteine synthetase deficiency has been implicated in some forms of hemolytic anemia. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Apr 2015]
Protein Families:	Druggable Genome
Protein Pathway	s: Glutathione metabolism, Metabolic pathways
