| Product Type:                            | Recombinant Proteins  |
|--|---|
| Description:                             | Relaxin 2 / RLN2 (25-185, His-tag) human recombinant protein, 0.1 mg  |
| Species:                                 | Human   |
| Expression Host:                         | E. coli   |
| Expression cDNA Clone<br>or AA Sequence: | MGSSHHHHHH SSGLVPRGSH MGSDSWMEEV IKLCGRELVR AQIAICGMST WSKRSLSQED<br>APQTPRPVAE IVPSFINKDT ETINMMSEFV ANLPQELKLT LSEMQPALPQ LQQHVPVLKD<br>SSLLFEEFKK LIRNRQSEAA DSSPSELKYL GLDTHSRKKR QLYSALANKC CHVGCTKRSL ARFC  |
| Tag:                                     | His-tag   |
| Predicted MW:                            | 20.7 kDa  |
| Concentration:                           | lot specific  |
| Purity:                                  | >85% by SDS - PAGE  |
| Buffer:                                  | Presentation State: This purified protein is available in a denatured form, making it less<br>suitable for functional studies. Denatured proteins are better suited for applications like<br>Western Blot (WB) or imaging assays.<br>State: Liquid purified protein<br>Buffer System: 20 mM Tris-HCl buffer (pH 8.0) containing 0.4M Urea, 10% glycerol |
| Preparation:                             | Liquid purified protein   |
| Protein Description:                     | Recombinant human RLN2 protein, fused to His-tag at N-terminus, was expressed in E.coli.  |
| Storage:                                 | Store undiluted at 2-8°C for one week or (in aliquots) at -20°C to -80°C for longer.<br>Avoid repeated freezing and thawing.  |
| Stability:                               | Shelf life: one year from despatch.   |
| RefSeq:                                  | <u>NP 001316120</u>   |
| Locus ID:                                | 6019  |
| Cytogenetics:                            | 9p24.1  |
| Synonyms:                                | Relaxin H2, Prorelaxin H2, Pro-Relaxin 2, RLXH2, Relaxin A chain, Relaxin B chain   |

#### **GRIGENE** Relaxin 2 / RLN2 (25-185, His-tag) Human Protein – AR50687PU-S

Summary: This gene encodes a member of the relaxin subfamily and insulin superfamily of peptide hormones. In humans there are three non-allelic relaxin genes. This gene encodes multiple protein isoforms, at least one of which undergoes proteolytic processing. This processing generates relaxin A and B chains that are linked by disulfide bonds to form the mature peptide hormone. This hormone plays a role in the male and female reproductive systems and was initially noted for its role in pregnancy. This protein also plays broader roles in the cardiovascular system, including in the regulation of blood pressure and control of heart rate, and data from animal models shows that this protein may have anti-fibrotic and cardioprotective effects. [provided by RefSeq, Jul 2016]

Protein Families: Secreted Protein
