	MIF (1-115, His-tag) Human Protein – AR51921PU-S
Synonyms:	Macrophage migration inhibitory factor, Phenylpyruvate tautomerase, Glycosylation- inhibiting factor, GLIF, MMIF
Summary:	This gene encodes a lymphokine involved in cell-mediated immunity, immunoregulation, and inflammation. It plays a role in the regulation of macrophage function in host defense through the suppression of anti-inflammatory effects of glucocorticoids. This lymphokine and the JAB1 protein form a complex in the cytosol near the peripheral plasma membrane, which may indicate an additional role in integrin signaling pathways. Protein Families	: Druggable Genome
Protein Pathwa	ys: Phenylalanine metabolism, Tyrosine metabolism
