	Neurofilament L (68kDa) – BA1012S
Summary:	Neurofilaments are the 10nm or intermediate filament proteins found specifically in neurons, and are composed predominantly of three major proteins called NF L, NF M and NF H. NF L is the neurofilament light or low molecular weight polypeptide and runs on SDS-PAGE gels at about 68kDa. Neurofilaments constitute the main structural elements of neuronal axons and dendrites. Neurofilaments are composed of three major subunits referred to as the neurofilament triplet, with molecular weights of 68kD, 160kD and 200kD. Neurofilament subunits are present in neurons, neuronal processes, peripheral nerves and sympathetic ganglion cells.
Protein Familie	s: Protein standard in 1D and 2D SDS gelelectrophoresis. Immunoassays.

Immunization.
