

Product datasheet for BIN042

HIV-1 (gp41) Protein

Product data:

Product Type: Recombinant Proteins

Description: HIV-1 gp41 recombinant protein, 0.1 mg

Expression Host: E. coli

Concentration: lot specific

Buffer: Presentation State: Purified

State: Liquid purified fraction (~95% pure by SDS-PAGE).

Buffer System: 10 mM Na2CO3, 10 mM EDTA, 14 mM beta-ME, 0.05% tween 20, containing no

preservatives.

Preparation: Liquid purified fraction (~95% pure by SDS-PAGE).

Applications: Suitable in ELISA.

Protein Description: Human Immunodeficiency Virus Type 1 (HIV-1) envelope antigen, gp41, recombinant.

Envelope, gp41 with Beta-galactosidase (114 kDa) fusion partner.

Note: Caution: No test guarantees a product to be non-infectious. All materials should be handled

as if potentially infectious. Generally accepted laboratory practices appropriate for infectious

materials should be employed when handling this product.

Store the antigen at 2-8°C for one month or (in aliquots) at -20°C for longer. Storage:

Avoid multiple freeze/thaw cycles.

Stability: Shelf life: six months from despatch.

Synonyms: HIV1, HIV-I, Human immunodeficiency virus type 1

Summary: HIV is a highly variable virus which mutates very readily. This means there are many different

> strains of HIV, even within the body of a single infected person. The strains of HIV1 can be classified into three groups: the "major" group M, the "outlier" group O and the "new" group

N. These three groups may represent three separate introductions of simian

immunodeficiency virus into humans. Group O appears to be restricted to West-Central Africa and group N, discovered in 1998 in Cameroon, is extremely rare. More than 90% of

HIV1 infections belong to HIV1 group M.

Protein Families: Suitable in ELISA.
