## CD11a (ITGAL) Mouse Monoclonal Antibody [Clone ID: MEM-25]

**Product data:** 

**Product Type:** Primary Antibodies

Clone Name: MEM-25
Applications: FC, FN, IP

Recommended Dilution: Flow cytometry: 2 µg/ml.

**Immunoprecipitation:** excellent antibody for immunoaffinity purification of LFA-1 complex.

**Functional application:** Partially blocks binding of LFA-1 complex to ICAM-1.

Reactivity: Human
Host: Mouse
Isotype: IgG1

Clonality: Monoclonal

**Immunogen:** Leukocytes from a pacient suffering from a LGL-type leukaemia

**Specificity:** This antibody reacts with CD11a (alpha subunit of human LFA-1), a 170-180 kDa type I

transmembrane glycoprotein expressed on B and T lymphocytes, monocytes, macrophages,

neutrophils, basophils and eosinophils.

Formulation: Azide free phosphate buffered saline (PBS), approx. pH 7.4; 0.2 μm filter sterilized

State: Low Endotoxin State: Liquid Ig fraction

**Concentration:** lot specific

**Purification:** Protein-A affinity chromatography (> 95% pure by SDS-PAGE)

Conjugation: Unconjugated

Storage: Store undiluted at 2-8°C.

DO NOT FREEZE!

**Stability:** Shelf life: one year from despatch.

Gene Name: integrin subunit alpha L

Database Link: Entrez Gene 3683 Human

P20701

## CD11a (ITGAL) Mouse Monoclonal Antibody [Clone ID: MEM-25] - BM4046LE

Background:

CD11a (LFA-1 alpha) together with CD18 constitute leukocyte function-associated antigen 1 (LFA-1), the alphaLbeta2 integrin. CD11a is implicated in activation of LFA-1 complex. LFA-1 is expressed on the plasma membrane of leukocytes in a low-affinity conformation. Cell stimulation by chemokines or other signals leads to induction the high-affinity conformation, which supports tight binding of LFA-1 to its ligands, the intercellular adhesion molecules ICAM-1, -2, -3. LFA-1 is thus involved in interaction of various immune cells and in their tissue-specific settlement, but participates also in control of cell differentiation and proliferation and of T-cell effector functions. Blocking of LFA-1 function by specific antibodies or small molecules has become an important therapeutic approach in treatment of multiple inflammatory diseases. For example, humanized anti-LFA-1 antibody Efalizumab (Raptiva) is being used to interfere with T cell migration to sites of inflammation; binding of cholesterol-lowering drug simvastatin to CD11a allosteric site leads to immunomodulation and increase in lymphocytic cholinergic activity.

Synonyms:

Integrin alpha-L, LFA1, LFA-1
