Product datasheet for BM4046S

CD11a (ITGAL) Mouse Monoclonal Antibody [Clone ID: MEM-25]

Product data:

| Product Type: | Primary Antibodies |
|-----------------------|--|
| Clone Name: | MEM-25 |
| Applications: | FC, FN, IP |
| Recommended Dilution: | Flow Cytometry: 2 µg/ml. Immunoprecipitation (excellent antibody for immunoaffinity purification of LFA-1 complex). Functional Application (the antibody blocks binding of LFA-1 complex to ICAM-1). |
| Reactivity: | Human |
| Host: | Mouse |
| lsotype: | lgG1 |
| Clonality: | Monoclonal |
| Immunogen: | Leucocytes from a pacient suffering from a LGL-type leukaemia |
| Specificity: | The antibody reacts with CD11a (a-subunit of human LFA-1), a 170-180 kDa type l transmembrane glycoprotein expressed on B and T lymphocytes, monocytes, macrophages, neutrophils, basophils and eosinophils. |
| Formulation: | Phosphate buffered saline (PBS) with 15 mM sodium azide, approx. pH 7.4 State: Purified State: Liquid Ig fraction |
| Concentration: | lot specific |
| Purification: | Protein-A affinity chromatography |
| Conjugation: | Unconjugated |
| Storage: | Store the antibody at 2 - 8 °C up to one month or (in aliquots) at -20 °C for longer. Avoid repeated freezing and thawing. |
| Stability: | Shelf life: one year from despatch. |
| Gene Name: | integrin subunit alpha L |
| Database Link: | <u>Entrez Gene 3683 Human</u> <u>P20701</u> |

CD11a (ITGAL) Mouse Monoclonal Antibody [Clone ID: MEM-25] – BM4046S

Background: CD11a (LFA-1a) together with CD18 constitute leukocyte function-associated antigen 1 (LFA-1), the aLb2 integrin. CD11a is implicated in activation of LFA-1 complex. LFA-1 is expressed on the plasma membrane of leukocytes in a low-affinity conformation. Cell stimulation by chemokines or other signals leads to induction the high-affinity conformation, which supports tight binding of LFA-1 to its ligands, the intercellular adhesion molecules ICAM-1, -2, -3. LFA-1 is thus involved in interaction of various immune cells and in their tissue-specific settlement, but participates also in control of cell differentiation and proliferation and of T-cell effector functions. Blocking of LFA-1 function by specific antibodies or small molecules has become an important therapeutic approach in treatment of multiple inflammatory diseases. For example, humanized anti-LFA-1 antibody Efalizumab (Raptiva) is being used to interfere with T cell migration to sites of inflammation; binding of cholesterol-lowering drug simvastatin to CD11a allosteric site leads to immunomodulation and increase in lymphocytic cholinergic activity.

Synonyms: Integrin alpha-L, LFA1, LFA-1
