

Product datasheet for BM563XL

KRT13 Mouse Monoclonal Antibody [Clone ID: Ks13.1]

Product data:

Product Type: Primary Antibodies

Clone Name: Ks13.1

Applications: IF, IHC, WB

Recommended Dilution: Immunoblotting.

Immunofluorescence.

Immunohistochemistry on Frozen Sections. Immunohistochemistry on Paraffin Sections.

Working Dilutions: Ready-to-use for Immunohistochemistry.

Incubation Time: 1 h at RT; extended with paraffin.

Reactivity: Bovine, Human, Rat

Host: Mouse Isotype: IgG1

Clonality: Monoclonal

Immunogen: Keratin K13 of Mr 54.000 purified from Human esophagus

Specificity: This Monoclonal Antibody Ks 13.1 represents an excellent marker to discriminate non-

cornified squamous epithelia from those of different origin.

Polypeptide Reacting: Mr 54 000 polypeptide Human keratin K13 (formerly designated

cytokeratin13; with minor affinity to keratins K14, Mr 50 000, and K16, Mr 48 000).

Tumors Specifically Detected: Several squamous cell carcinomas, e.g. cervix carcinoma;

transitional cell carcinoma of the bladder; craniopharyngioma.

Tested Reactivities on Cultured on Cell Lines: Cell lines from squamous cell CA, e.g. A-431

from epidermoid CA of vulva; RT 112, RT-4 of urinary bladder.

Formulation: PBS, pH 7.4

State: Purified

State: Liquid purified IgG fraction

Stabilizer: 0.5% BSA

Preservative: 0.09% Sodium Azide

Purification: Protein A Affinity Chromatography

Conjugation: Unconjugated

KRT13 Mouse Monoclonal Antibody [Clone ID: Ks13.1] - BM563XL

Storage: Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.

Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: keratin 13

Database Link: Entrez Gene 287699 RatEntrez Gene 3860 Human

P13646

Background: Cytokeratin 13 is a member of the keratin gene family. The keratins are intermediate filament

proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. Most of the type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. This type I cytokeratin is paired with keratin 4 and expressed in the suprabasal layers of non-cornified stratified epithelia. Mutations in this gene and keratin 4 have been associated with the autosomal dominant

disorder White Sponge Nevus.

Synonyms: CK-13, CK13, Keratin-13, KRT13, K13, KRT-13
