

Product datasheet for **BP1028HRP**

Hepatitis B Surface Antigen / HBsAg (ad/ay) Goat Polyclonal Antibody

Product data:

Product Type:	Primary Antibodies
Applications:	ELISA
Recommended Dilution:	ELISA.
Reactivity:	Hepatitis B Virus
Host:	Goat
Clonality:	Polyclonal
Immunogen:	Mixture of subtypes ad & ay. Hepatitis B surface antigen purified from human serum.
Specificity:	Monospecific, reacts only with Hepatitis B surface antigen. Non-reactive with normal human serum.
Formulation:	PBS containing 10 mg/ml BSA as stabilizer and 0.002% Thimerosal as preservative. Label: HRP State: Liquid purified Ig fraction. Label: Highly purified preparation of horseradish peroxidase (RZ>3). Care is taken to ensure adequate conjugation while preserving maximum enzyme activity. Free enzyme is removed Molar ratio: Estimated molar HRP: IgG substitution is 2-3.
Concentration:	lot specific
Conjugation:	HRP
Storage:	Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Background:	Hepatitis B Virus (HBV) infection induces a disease state which manifests itself in a variety of ways, characterized by the extent of liver damage, inflammation and viral persistence. HBV infection is also associated with a 100 fold increased risk of hepatocellular carcinoma and currently infects over 250 million people worldwide. HBV has a partially double stranded 3.2 kilobase DNA genome which contains four open reading frames. One of these encodes a 154 amino acid protein called the HBx protein. HBx has been shown to be a transcriptional transactivator of both viral and cellular promoters. Lacking a DNA binding domain and nuclear localization signal, HBx is believed to exert transcriptional activity through protein protein interaction.
