| Product Type: | Primary Antibodies |
|------------------------|--|
| Applications: | ELISA, IF, IHC, R |
| Recommended Dilution: | Western Blot. Radioimmunoassay: 1/200. ELISA: \geq 1/200. Immunfluorescence (Indirect): \geq 1/80. Immunohistochemistry on Paraffin Sections: \geq 1/500. Pretreatment: After de-waxing the tissue slices they are treated with 0.2% hyaluronidase (app. 300 U/mg) in TBS 15 min at 37°C. There after non-specific binding is blocked by blocking serum or 3% BSA in TBS. For peroxidase systems blocking with 1% peroxide solution in TBS for 30 min at RT is recommended. Incubation time: 60 min at RT or 2-8°C over night. Positive Control: Mouse skin. |
| Reactivity: | Mouse |
| Host: | Rabbit |
| Clonality: | Polyclonal |
| Immunogen: | Purified Collagen type I from Mouse skin |
| Specificity: | This antibody reacts with Mouse Collagen type I (100%), Mouse Collagen type II and IV (< 0.1%), Mouse Collage type III (< 1%), Human, Chicken and Rat Collagen type I (< 0.1%, RIA at 1/200 dilution). |
| Formulation: | Phosphate Buffered Solution without stabilizer or preservatives State: Purified State: Lyophilized purified IgG fraction |
| Reconstitution Method: | Restore with 0.1 ml sterile distilled water. For further dilution use appropriate antibody diluent. |
| Concentration: | lot specific |
| Purification: | Affinity Chromatography |
| Conjugation: | Unconjugated |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

| | Col1a1 Rabbit Polyclonal Antibody – BP8003S |
|----------------|--|
| Storage: | Store lyophilized at 2-8°C for 6 months or at -20°C long term. After reconstitution store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C long term. Avoid repeated freezing and thawing. |
| Stability: | Shelf life: one year from despatch. |
| Gene Name: | collagen, type I, alpha 1 |
| Database Link: | Entrez Gene 12842 Mouse P11087 |
| Background: | Collagens consist in a family of highly specialized glycoproteins of which at least 16 genetically distinct types are known to date. The basal unit of a collagen molecule cosists in a tripel-helical structure formed by 3 alpha-chains. Predominant amino acids are glycine, proline and hydroxproline. Regularly also lysines and hydroxylysines occur, which are responsible for cross-linkage and glycosylation of the protein chains. Different composition of alpha-chains and different glycosylation contribute to the high variability of collagens in different tissues and organs. Type I collagen (95 kDa) is found in bone, cornea, skin and tendon. |
| Synonyms: | COL1A1, COL1A2, Alpha-1 type I collagen, Alpha-2 type I collagen |
