

Alpha-Gold Competent Cells (5 x 200 ul)

Catalog # CC100002

Genotype:

F⁻ *deoR endA1 recA1 relA1 gyrA96 hsdR17(r_k⁻, m_k⁺) supE44 thi-1 phoA Δ(lacZYA argF)U169 Φ80lacZΔM15λ⁻*

Product Description: Alpha-Gold Competent Cells contain a *lacZ* marker that provides α - complementation of the β-galactosidase gene for blue/white color screening. The cells are also ideal for generating cDNA libraries and subcloning. Alpha-Gold Competent Cells also provide *recA1* and *endA1* markers for minimal recombination and enhance the quality of the plasmid DNA. pUC19 DNA is also provided as a positive control.

Product Specifications

Alpha-Gold competent cells - 1ml (5 x 200μl)

Control DNA - pUC19 (10pg/μl)

SOC Medium – 10 ml

Efficiency: ≥10⁹ cfu/μg of pUC19

Features

- Both Electroporation Grade and Chemically Competent
- Accommodates small and larger plasmids
- Minimal recombination and enhanced quality of plasmid DNA

Shipping

This product is shipped on Dry Ice

Storage and Stability: Alpha-Gold Competent Cells should be stored at -80°C. The cells are stable for 6 months from the date of shipment.

Terms of Use

By opening the product, the purchaser agrees not to distribute, resell, modify for re-sell or use to manufacture commercial products without prior written approval from OriGene Technologies, Inc. If you do not agree with these conditions, please return product to OriGene for a full refund.
