<b>ORIGENE</b>	GFAP Mouse Monoclonal Antibody [Clone ID: OTI2D8] – CF500341
----------------	--

Background:This gene encodes one of the major intermediate filament proteins of mature astrocytes. It is<br/>used as a marker to distinguish astrocytes from other glial cells during development.<br/>Mutations in this gene cause Alexander disease, a rare disorder of astrocytes in the central<br/>nervous system. Alternative splicing results in multiple transcript variants encoding distinct<br/>isoforms.

Synonyms: ALXDRD

Protein Families: ES Cell Differentiation/IPS

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY GFAP ([RC204548], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-GFAP. Positive lysates [LY419563] (100ug) and [LC419563] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-GFAP monoclonal antibody.
