	Aurora C (AURKC) Mouse Monoclonal Antibody [Clone ID: OTI2B7] – CF500602
Background:	This gene encodes a member of the Aurora subfamily of serine/threonine protein kinases. The encoded protein is a chromosomal passenger protein that forms complexes with Aurora- B and inner centromere proteins and may play a role in organizing microtubules in relation to centrosome/spindle function during mitosis. This gene is overexpressed in several cancer cell lines, suggesting an involvement in oncogenic signal transduction. Alternative splicing results in multiple transcript variants.
Synonyms:	AIE2; AIK3; ARK3; AurC; aurora-C; HEL-S-90; SPGF5; STK13
Protein Families	: Druggable Genome, Protein Kinase

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY AURKC ([RC213890], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-AURKC. Positive lysates [LY423127] (100ug) and [LC423127] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (10ug) from 4 different cell lines by using anti-AURKC monoclonal antibody (1:200).
