# Product datasheet for CF500912

### IDH3A Mouse Monoclonal Antibody [Clone ID: OTI2E9]

#### **Product data:**

| Product Type:           | Primary Antibodies   |
|-------------------------|--|
| Clone Name:             | OTI2E9   |
| Applications:           | FC, IF   |
| Recommended Dilution:   | IF 1:100, Flow 1:100   |
| Reactivity:             | Human, Mouse, Rat  |
| Host:                   | Mouse  |
| lsotype:                | lgG1   |
| Clonality:              | Monoclonal   |
| Immunogen:              | Full length human recombinant protein of human IDH3A (NP_005521) produced in HEK293T cell.   |
| Formulation:            | Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)  |
| Reconstitution Method:  | For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific) |
| Purification:           | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)  |
| Conjugation:            | Unconjugated   |
| Storage:                | Store at -20°C as received.  |
| Stability:              | Stable for 12 months from date of receipt.   |
| Predicted Protein Size: | 39.6 kDa   |
| Gene Name:              | isocitrate dehydrogenase (NAD(+)) 3 catalytic subunit alpha  |
| Database Link:          | <u>NP_005521</u><br><u>Entrez Gene 67834 MouseEntrez Gene 114096 RatEntrez Gene 3419 Human</u><br><u>P50213</u>  |

|                 | IDH3A Mouse Monoclonal Antibody [Clone ID: OTI2E9] – CF500912  |
|-----------------|--|
| Background:     | Isocitrate dehydrogenases catalyze the oxidative decarboxylation of isocitrate to 2-<br>oxoglutarate. These enzymes belong to two distinct subclasses, one of which utilizes NAD(+)<br>as the electron acceptor and the other NADP(+). Five isocitrate dehydrogenases have been<br>reported: three NAD(+)-dependent isocitrate dehydrogenases, which localize to the<br>mitochondrial matrix, and two NADP(+)-dependent isocitrate dehydrogenases, one of which<br>is mitochondrial and the other predominantly cytosolic. NAD(+)-dependent isocitrate<br>dehydrogenases catalyze the allosterically regulated rate-limiting step of the tricarboxylic acid<br>cycle. Each isozyme is a heterotetramer that is composed of two alpha subunits, one beta<br>subunit, and one gamma subunit. The protein encoded by this gene is the alpha subunit of<br>one isozyme of NAD(+)-dependent isocitrate dehydrogenase. |
| Synonyms:       | H-IDH alpha; isocitrate dehydrogenase (NAD+) alpha chain; isocitrate dehydrogenase 3<br>(NAD+) a; isocitrate dehydrogenase [NAD] subunit alpha; isocitric dehydrogenase;<br>mitochondrial; NAD(H)-specific isocitrate dehydrogenase alpha subunit; NAD+-specific ICDH  |
| Protein Pathway | s: Citrate cycle (TCA cycle), Metabolic pathways   |

## **Product images:**

Anti-IDH3A mouse monoclonal antibody ([TA500912]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY IDH3A ([RC200313]).

HEK293T cells transfected with either pCMV6-ENTRY IDH3A ([RC200313]) (Red) or empty vector control plasmid (Blue) were immunostained with anti-IDH3A mouse monoclonal ([TA500912]), and then analyzed by flow cytometry.
