

Product datasheet for CF501430

PEX5 Mouse Monoclonal Antibody [Clone ID: OTI6E9]

Product data:

Product Type: Primary Antibodies Clone Name: OTI6F9 **Applications:** FC, IF, WB Recommended Dilution: WB 1:500~2000, IF 1:100, FLOW 1:100 **Reactivity:** Human, Dog, Rat, Monkey, Mouse Host: Mouse Isotype: lgG1 **Clonality:** Monoclonal Immunogen: Full length human recombinant protein of human PEX5 (NP_000310) produced in HEK293T cell. Formulation: Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose) **Reconstitution Method:** For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific) Purification: Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G) **Conjugation:** Unconjugated Store at -20°C as received. Storage: Stability: Stable for 12 months from date of receipt. **Predicted Protein Size:** 69.7 kDa Gene Name: peroxisomal biogenesis factor 5 Database Link: NP 000310 Entrez Gene 19305 MouseEntrez Gene 312703 RatEntrez Gene 486710 DogEntrez Gene 715173 MonkeyEntrez Gene 5830 Human P50542

Section 201430 PEX5 Mouse Monoclonal Antibody [Clone ID: OTI6E9] – CF501430

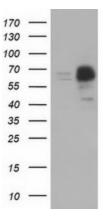

Background: The product of this gene binds to the C-terminal PTS1-type tripeptide peroxisomal targeting signal (SKL-type) and plays an essential role in peroxisomal protein import. Peroxins (PEXs) are proteins that are essential for the assembly of functional peroxisomes. The peroxisome biogenesis disorders (PBDs) are a group of genetically heterogeneous autosomal recessive, lethal diseases characterized by multiple defects in peroxisome function. The peroxisomal biogenesis disorders are a heterogeneous group with at least 14 complementation groups and with more than 1 phenotype being observed in cases falling into particular complementation groups. Although the clinical features of PBD patients vary, cells from all PBD patients exhibit a defect in the import of one or more classes of peroxisomal matrix proteins into the organelle. Defects in this gene are a cause of neonatal adrenoleukodystrophy (NALD), a cause of Zellweger syndrome (ZWS) as well as may be a cause of infantile Refsum disease (IRD). Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq]

Synonyms: PBD2A; PBD2B; PTS1-BP; PTS1R; PXR1; RCDP5

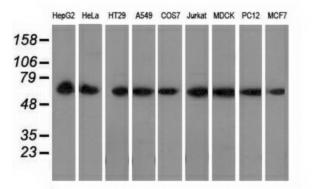

Protein Families:

Druggable Genome

Product images:

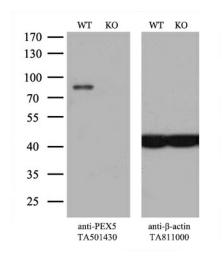

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY PEX5 (Cat# [RC202062], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PEX5(Cat# [TA501430]). Positive lysates [LY424800] (100ug) and [LC424800] (20ug) can be purchased separately from OriGene.

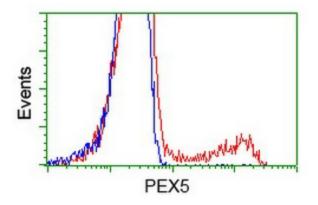

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-PEX5 monoclonal antibody.

Equivalent amounts of cell lysates (10 ug per lane) of wild-type 293T cells (WT, Cat# LC810293T) and PEX5-Knockout 293T cells (KO, Cat# [LC812441]) were separated by SDS-PAGE and immunoblotted with anti-PEX5 monoclonal antibody [TA501430], (1:500). Then the blotted membrane was stripped and reprobed with antib-actin antibody ([TA811000]) as a loading control.

Anti-PEX5 mouse monoclonal antibody ([TA501430]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY PEX5 ([RC202062]).

HEK293T cells transfected with either [RC202062] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-PEX5 antibody ([TA501430]), and then analyzed by flow cytometry.
