	Protein Kinase D2 (PRKD2) Mouse Monoclonal Antibody [Clone ID: OTI4F1] – CF501684
Background:	The protein encoded by this gene belongs to the protein kinase D (PKD) family of serine/threonine protein kinases. This kinase can be activated by phorbol esters as well as by gastrin via the cholecystokinin B receptor (CCKBR) in gastric cancer cells. It can bind to diacylglycerol (DAG) in the trans-Golgi network (TGN) and may regulate basolateral membrane protein exit from TGN. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq]
Synonyms:	HSPC187; nPKC-D2; PKD2

Protein Families: Druggable Genome, Protein Kinase

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PRKD2 ([RC215335], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PRKD2. Positive lysates [LY402555] (100ug) and [LC402555] (20ug) can be purchased separately from OriGene.
