# Product datasheet for CF501726

# ERCC1 Mouse Monoclonal Antibody [Clone ID: OTI2A9]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI2A9
Applications:	FC, IF, WB
Recommended Dilution:	WB 1:500~2000, IF 1:100, FLOW 1:100
Reactivity:	Human, Dog, Monkey, Mouse
Host:	Mouse
lsotype:	lgG2b
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human ERCC1 (NP_973730) produced in HEK293T cell.
Formulation:	Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)
Reconstitution Method:	For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific)
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	32.4 kDa
Gene Name:	ERCC excision repair 1, endonuclease non-catalytic subunit
Database Link:	<u>NP_001974</u> <u>Entrez Gene 13870 MouseEntrez Gene 612282 DogEntrez Gene 574267 MonkeyEntrez Gene</u> <u>2067 Human</u> <u>P07992</u>

### **GRIGENE** ERCC1 Mouse Monoclonal Antibody [Clone ID: OTI2A9] – CF501726

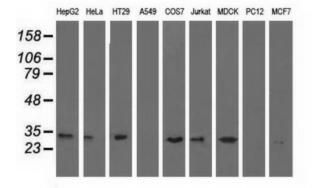

Background:The product of this gene functions in the nucleotide excision repair pathway, and is required<br/>for the repair of DNA lesions such as those induced by UV light or formed by electrophilic<br/>compounds including cisplatin. The encoded protein forms a heterodimer with the XPF<br/>endonuclease (also known as ERCC4), and the heterodimeric endonuclease catalyzes the 5'<br/>incision in the process of excising the DNA lesion. The heterodimeric endonuclease is also<br/>involved in recombinational DNA repair and in the repair of inter-strand crosslinks.<br/>Mutations in this gene result in cerebrooculofacioskeletal syndrome, and polymorphisms that<br/>alter expression of this gene may play a role in carcinogenesis. Multiple transcript variants<br/>encoding different isoforms have been found for this gene. The last exon of this gene<br/>overlaps with the CD3e molecule, epsilon associated protein gene on the opposite strand.<br/>[provided by RefSeq]

Synonyms:	COFS4; RAD10; UV20
Protein Families:	Druggable Genome
Protein Pathways:	Nucleotide excision repair

### **Product images:**

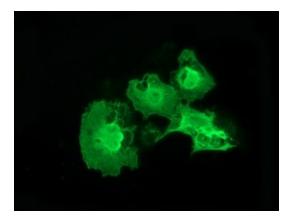

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ERCC1 ([RC200478], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ERCC1. Positive lysates [LY419605] (100ug) and [LC419605] (20ug) can be purchased separately from OriGene.

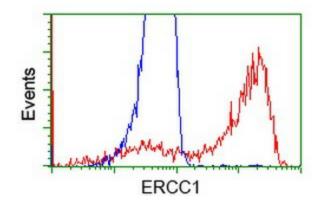

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-ERCC1 monoclonal antibody.

Anti-ERCC1 mouse monoclonal antibody ([TA501726]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY ERCC1 ([RC200478]).

HEK293T cells transfected with either [RC200478] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-ERCC1 antibody ([TA501726]), and then analyzed by flow cytometry.
