	CDKN3 Mouse Monoclonal Antibody [Clone ID: OTI2A5] – CF503584
Background:	The protein encoded by this gene belongs to the dual specificity protein phosphatase family. It was identified as a cyclin-dependent kinase inhibitor, and has been shown to interact with, and dephosphorylate CDK2 kinase, thus prevent the activation of CDK2 kinase. This gene wa reported to be deleted, mutated, or overexpressed in several kinds of cancers. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]

Protein Families: Druggable Genome, Phosphatase

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CDKN3 ([RC213080], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CDKN3. Positive lysates [LY417450] (100ug) and [LC417450] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC213080] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-CDKN3 antibody ([TA503584]), and then analyzed by flow cytometry.
