Product datasheet for CF504389

PSMB9 Mouse Monoclonal Antibody [Clone ID: OTI1F10]

Product data:

| Product Type: | Primary Antibodies |
|-------------------------|--|
| Clone Name: | OTI1F10 |
| Applications: | FC, WB |
| Recommended Dilution: | WB 1:500~2000, FLOW 1:100 |
| Reactivity: | Human, Rat, Mouse |
| Host: | Mouse |
| lsotype: | lgG1 |
| Clonality: | Monoclonal |
| Immunogen: | Human recombinant protein fragment corresponding to amino acids 21-219 of human PSMB9(NP_002791) produced in E.coli. |
| Formulation: | Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose) |
| Reconstitution Method: | For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific) |
| Purification: | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G) |
| Conjugation: | Unconjugated |
| Storage: | Store at -20°C as received. |
| Stability: | Stable for 12 months from date of receipt. |
| Predicted Protein Size: | 23.1 kDa |
| Gene Name: | proteasome 20S subunit beta 9 |
| Database Link: | <u>NP_002791</u> <u>Entrez Gene 16912 MouseEntrez Gene 24967 RatEntrez Gene 5698 Human</u> <u>P28065</u> |

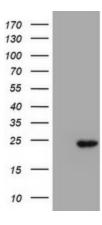

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

SMB9 Mouse Monoclonal Antibody [Clone ID: OTI1F10] – CF504389 PSMB9 Mouse Monoclonal Antibody [Clone ID: OTI1F10] – CF504389

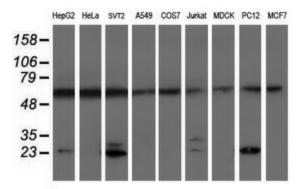

Background:The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S
core structure. The core structure is composed of 4 rings of 28 non-identical subunits; 2 rings
are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. Proteasomes
are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an
ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a
modified proteasome, the immunoproteasome, is the processing of class I MHC peptides.
This gene encodes a member of the proteasome B-type family, also known as the T1B family,
that is a 20S core beta subunit. This gene is located in the class II region of the MHC (major
histocompatibility complex). Expression of this gene is induced by gamma interferon and this
gene product replaces catalytic subunit 1 (proteasome beta 6 subunit) in the
immunoproteasome. Proteolytic processing is required to generate a mature subunit.
[provided by RefSeq, Mar

| Synonyms: | beta1i; LMP2; PSMB6i; RING12 |
|-------------------|------------------------------|
| Protein Families: | Druggable Genome, Protease |
| Protein Pathways: | Proteasome |

Product images:

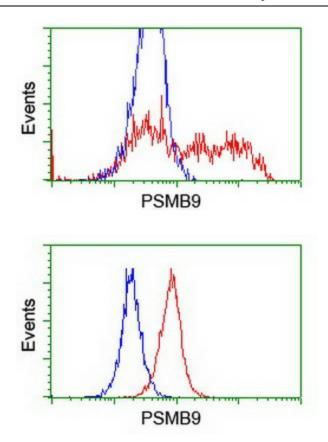

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PSMB9 ([RC209001], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PSMB9. Positive lysates [LY419098] (100ug) and [LC419098] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-PSMB9 monoclonal antibody (HepG2: human; HeLa: human; SVT2: mouse; A549: human; COS7: monkey; Jurkat: human; MDCK: canine; PC12: rat; MCF7: human).

HEK293T cells transfected with either [RC209001] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-PSMB9 antibody ([TA504389]), and then analyzed by flow cytometry.

Flow cytometric Analysis of Jurkat cells, using anti-PSMB9 antibody ([TA504389]), (Red), compared to a nonspecific negative control antibody, (Blue).
