CRIGENE DOK7 Mouse Monoclonal Antibody [Clone ID: OTI4C6] – CF504786

Background:

The protein encoded by this gene is essential for neuromuscular synaptogenesis. The protein functions in aneural activation of muscle-specific receptor kinase, which is required for postsynaptic differentiation, and in the subsequent clustering of the acetylcholine receptor in myotubes. This protein can also induce autophosphorylation of muscle-specific receptor kinase. Mutations in this gene are a cause of familial limb-girdle myasthenia autosomal recessive, which is also known as congenital myasthenic syndrome type 1B. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Sep 2009]

Synonyms: C4orf25; CMS1B; CMS10

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY DOK7 ([RC219267], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DOK7. Positive lysates [LY406543] (100ug) and [LC406543] (20ug) can be purchased separately from OriGene.

Anti-DOK7 mouse monoclonal antibody ([TA504786]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY DOK7 ([RC219267]).
