CRIGENE LMO2 Mouse Monoclonal Antibody [Clone ID: OTI1C8] – CF506139

Background:LMO2 encodes a cysteine-rich, two LIM-domain protein that is required for yolk sac
erythropoiesis. The LMO2 protein has a central and crucial role in hematopoietic
development and is highly conserved. The LMO2 transcription start site is located
approximately 25 kb downstream from the 11p13 T-cell translocation cluster (11p13 ttc),
where a number T-cell acute lymphoblastic leukemia-specific translocations occur.
Alternative splicing results in multiple transcript variants encoding different isoforms.

Synonyms: RBTN2; RBTNL1; RHOM2; TTG2

Protein Families: Druggable Genome

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LMO2 ([RC205376], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LMO2. Positive lysates [LY432149] (100ug) and [LC432149] (20ug) can be purchased separately from OriGene.
