# Product datasheet for CF506226

# PDGF Receptor beta (PDGFRB) Mouse Monoclonal Antibody [Clone ID: OTI1D1]

### **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI1D1
Applications:	IF, WB
Recommended Dilution:	WB 1:1000, IF 1:100
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human PDGFRB(RNP_002600) produced in HEk293T cell.
Formulation:	Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)
Reconstitution Method:	For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific)
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	123.8 kDa
Gene Name:	platelet derived growth factor receptor beta
Database Link:	<u>NP_002600</u> <u>Entrez Gene 18596 MouseEntrez Gene 24629 RatEntrez Gene 5159 Human</u> <u>P09619</u>

	PDGF Receptor beta (PDGFRB) Mouse Monoclonal Antibody [Clone ID: OTI1D1] – CF506226
Background:	This gene encodes a cell surface tyrosine kinase receptor for members of the platelet-derived growth factor family. These growth factors are mitogens for cells of mesenchymal origin. The identity of the growth factor bound to a receptor monomer determines whether the functional receptor is a homodimer or a heterodimer, composed of both platelet-derived growth factor receptor alpha and beta polypeptides. This gene is flanked on chromosome 5 by the genes for granulocyte-macrophage colony-stimulating factor and macrophage-colony stimulating factor receptor; all three genes may be implicated in the 5-q syndrome. A translocation between chromosomes 5 and 12, that fuses this gene to that of the translocation, ETV6, leukemia gene, results in chronic myeloproliferative disorder with eosinophilia. [provided by RefSeq, Jul 2008]
Synonyms:	CD140B; IBGC4; IMF1; JTK12; PDGFR; PDGFR-1; PDGFR1
Protein Families	: Druggable Genome, ES Cell Differentiation/IPS, Protein Kinase, Transmembrane
Protein Pathway	<b>vs:</b> Calcium signaling pathway, Colorectal cancer, Cytokine-cytokine receptor interaction, Focal adhesion, Gap junction, Glioma, MAPK signaling pathway, Melanoma, Pathways in cancer, Prostate cancer, Regulation of actin cytoskeleton

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PDGFRB ([RC206377], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PDGFRB. Positive lysates [LY400921] (100ug) and [LC400921] (20ug) can be purchased separately from OriGene.

Immunofluorescent staining of HeLa cells using anti-PDGFRB mouse monoclonal antibody ([TA506226]).
