| O RÏGENE | CD163 Mouse Monoclonal Antibody [Clone ID: OTI2G12] – CF506380 |
|-------------------------|---|
| Background: | The protein encoded by this gene is a member of the scavenger receptor cysteine-rich (SRCR) superfamily, and is exclusively expressed in monocytes and macrophages. It functions as an acute phase-regulated receptor involved in the clearance and endocytosis of hemoglobin/haptoglobin complexes by macrophages, and may thereby protect tissues from free hemoglobin-mediated oxidative damage. This protein may also function as an innate immune sensor for bacteria and inducer of local inflammation. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq, Aug 2011] |
| Synonyms: | M130; MM130; SCARI1 |
| Protein Families | : Druggable Genome, Secreted Protein, Transmembrane |

Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CD163(Cat# [TA506380]). Positive lysates [LY401362] (100ug) and [LC401362] (20ug) can be purchased separately from OriGene.

HEK293T cells were transfected with the pCMV6-

Western blot analysis of extracts (35ug) from 3 tissue lysates by using anti-CD163 monoclonal antibody (1:250).
