Background: This gene encodes a member of the Snail family of C2H2-type zinc finger transcription factors. The encoded protein acts as a transcriptional repressor that binds to E-box motifs and is also likely to repress E-cadherin transcription in breast carcinoma. This protein is involved in epithelial-mesenchymal transitions and has antiapoptotic activity. Mutations in this gene may be associated with sporadic cases of neural tube defects. HEK293T cells transfected with either [RC202365] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-SNAI2 antibody ([TA800167]), and then analyzed by flow cytometry.

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY SNAI2 (Cat# [RC202365], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SNAI2 (Cat# [TA800167]). Positive lysates [LY401070] (100ug) and [LC401070] (20ug) can be purchased separately from OriGene.
