Product datasheet for CF800407

Epoxide hydrolase (EPHX1) Mouse Monoclonal Antibody [Clone ID: OTI3F10]

Product data:

Product Type:	Primary Antibodies
Clone Name:	OTI3F10
Applications:	IHC, WB
Recommended Dilution:	WB 1:2000, IHC 1:150
Reactivity:	Human, Rat, Monkey, Mouse
Host:	Mouse
lsotype:	lgG2b
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 21-230 of human EPHX1 (NP_000111) produced in E.coli.
Formulation:	Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)
Reconstitution Method:	For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific)
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	52.8 kDa
Gene Name:	epoxide hydrolase 1
Database Link:	<u>NP_000111</u> <u>Entrez Gene 13849 MouseEntrez Gene 25315 RatEntrez Gene 700180 MonkeyEntrez Gene</u> <u>2052 Human</u> <u>P07099</u>

	Epoxide hydrolase (EPHX1) Mouse Monoclonal Antibody [Clone ID: OTI3F10] – CF800407
Background:	Epoxide hydrolase is a critical biotransformation enzyme that converts epoxides from the degradation of aromatic compounds to trans-dihydrodiols which can be conjugated and excreted from the body. Epoxide hydrolase functions in both the activation and detoxification of epoxides. Mutations in this gene cause preeclampsia, epoxide hydrolase deficiency or increased epoxide hydrolase activity. Alternatively spliced transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Dec 2008]
Synonyms:	EPHX; EPOX; HYL1; MEH
Protein Families	: Druggable Genome, Protease
Protein Pathwa	ys: Metabolism of xenobiotics by cytochrome P450

HepG2 HeLa SVT2 A549 COS7 Jurkat MDCK PC12 MCF7 158 -106 -79 -48 -35 -23 - HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY EPHX1 (Cat# [RC200621], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-EPHX1(Cat# [TA800407]). Positive lysates [LY400042] (100ug) and [LC400042] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-EPHX1 monoclonal antibody (HepG2: human; HeLa: human; SVT2: mouse; A549: human; COS7: monkey; Jurkat: human; MDCK: canine; PC12: rat; MCF7: human).
