|   | l 3 Kinase Class 2A (PIK3C2A) Mouse Monoclonal Antibody [Clone ID: OTI2B5] – CF801708   |  |  |
|---|---|--|--|
| Background:   | The protein encoded by this gene belongs to the phosphoinositide 3-kinase (PI3K) family. PI3-<br>kinases play roles in signaling pathways involved in cell proliferation, oncogenic<br>transformation, cell survival, cell migration, and intracellular protein trafficking. This protein<br>contains a lipid kinase catalytic domain as well as a C-terminal C2 domain, a characteristic of<br>class II PI3-kinases. C2 domains act as calcium-dependent phospholipid binding motifs that<br>mediate translocation of proteins to membranes, and may also mediate protein-protein<br>interactions. The PI3-kinase activity of this protein is not sensitive to nanomolar levels of the<br>inhibitor wortmanin. This protein was shown to be able to be activated by insulin and may be<br>involved in integrin-dependent signaling. [provided by RefSeq, Jul 2008] |  |  |
