

# Product datasheet for CF802225

## CD4 Mouse Monoclonal Antibody [Clone ID: OTI4F10]

### **Product data:**

#### **Product Type: Primary Antibodies Clone Name:** OTI4F10 **Applications:** WB Recommended Dilution: WB 1:2000 **Reactivity:** Human Host: Mouse Isotype: lgG2b **Clonality:** Monoclonal Full length human recombinant protein of human CD4 (NP\_000607) produced in HEK293T Immunogen: cell. Formulation: Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose) **Reconstitution Method:** For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific) Purification: Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G) **Conjugation:** Unconjugated Storage: Store at -20°C as received. Stability: Stable for 12 months from date of receipt. **Predicted Protein Size:** 48.3 kDa Gene Name: CD4 molecule Database Link: NP 000607 Entrez Gene 920 Human P01730

	CD4 Mouse Monoclonal Antibody [Clone ID: OTI4F10] – CF802225
Background:	This gene encodes a membrane glycoprotein of T lymphocytes that interacts with major histocompatibility complex class II antigenes and is also a receptor for the human immunodeficiency virus. This gene is expressed not only in T lymphocytes, but also in B cells, macrophages, and granulocytes. It is also expressed in specific regions of the brain. The protein functions to initiate or augment the early phase of T-cell activation, and may function as an important mediator of indirect neuronal damage in infectious and immune-mediated diseases of the central nervous system. Multiple alternatively spliced transcript variants encoding different isoforms have been identified in this gene. [provided by RefSeq, Aug 2010]
Synonyms:	CD4mut; IMD79; OKT4D
Protein Families	: Adult stem cells, Druggable Genome, ES Cell Differentiation/IPS, Induced pluripotent stem cells, Transmembrane
Protein Pathway	<b>vs:</b> Antigen processing and presentation, Cell adhesion molecules (CAMs), Hematopoietic cell lineage, Primary immunodeficiency, T cell receptor signaling pathway

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CD4 ([RC206453], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CD4. Positive lysates [LY400209] (100ug) and [LC400209] (20ug) can be purchased separately from OriGene.
