Macrophage Inflammatory Protein 3 beta (CCL19) Mouse Monoclonal Antibody [Clone ID: OTI2A12] – CF804261

Background: This gene is one of several CC cytokine genes clustered on the p-arm of chromosome 9.

Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory processes. The CC cytokines are proteins characterized by two adjacent cysteines. The cytokine encoded by this gene may play a role in normal lymphocyte recirculation and homing. It also plays an important role in trafficking of T cells in thymus, and in T cell and B cell migration to secondary lymphoid organs. It specifically binds to chemokine receptor

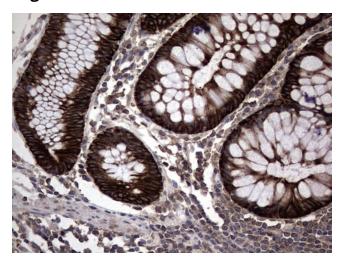

CCR7. [provided by RefSeq, Jul 2008]

Synonyms: CKb11; ELC; MIP-3b; MIP3B; SCYA19

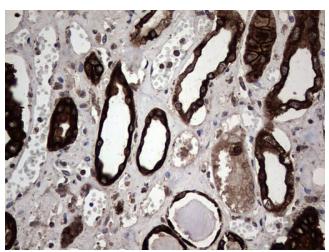

Protein Families: Druggable Genome, Secreted Protein

Protein Pathways: Chemokine signaling pathway, Cytokine-cytokine receptor interaction
