## Galectin 3 (LGALS3) Mouse Monoclonal Antibody [Clone ID: OTI21C1] – CF804700

Background:This gene encodes a member of the galectin family of carbohydrate binding proteins.<br/>Members of this protein family have an affinity for beta-galactosides. The encoded protein is<br/>characterized by an N-terminal proline-rich tandem repeat domain and a single C-terminal<br/>carbohydrate recognition domain. This protein can self-associate through the N-terminal<br/>domain allowing it to bind to multivalent saccharide ligands. This protein localizes to the<br/>extracellular matrix, the cytoplasm and the nucleus. This protein plays a role in numerous<br/>cellular functions including apoptosis, innate immunity, cell adhesion and T-cell regulation.<br/>Alternate splicing results in multiple transcript variants. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LGALS3 ([RC208785], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LGALS3. Positive lysates [LY400834] (100ug) and [LC400834] (20ug) can be purchased separately from OriGene.

Immunohistochemical staining of paraffinembedded Human colon tissue within the normal limits using anti-LGALS3 mouse monoclonal antibody. (Heat-induced epitope retrieval by 1mM EDTA in 10mM Tris, pH8.5, 120°C for 3min, [TA804700])
