#### CRIGENE R Cadherin (CDH4) Mouse Monoclonal Antibody [Clone ID: OTI4F5] – CF804735

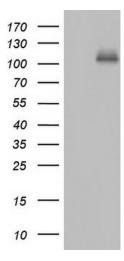

Background:This gene is a classical cadherin from the cadherin superfamily. The encoded protein is a<br/>calcium-dependent cell-cell adhesion glycoprotein comprised of five extracellular cadherin<br/>repeats, a transmembrane region and a highly conserved cytoplasmic tail. Based on studies<br/>in chicken and mouse, this cadherin is thought to play an important role during brain<br/>segmentation and neuronal outgrowth. In addition, a role in kidney and muscle development<br/>is indicated. Of particular interest are studies showing stable cis-heterodimers of cadherins 2<br/>and 4 in cotransfected cell lines. Previously thought to interact in an exclusively homophilic<br/>manner, this is the first evidence of cadherin heterodimerization. Three transcript variants<br/>encoding different isoforms have been found for this gene. [provided by RefSeq, Nov 2011]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CDH4 ([RC210970], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CDH4. Positive lysates [LY400684] (100ug) and [LC400684] (20ug) can be purchased separately from OriGene.
