Apolipoprotein E (APOE) Mouse Monoclonal Antibody [Clone ID: OTI1E6]

Product data:

Product Type: Primary Antibodies

Clone Name: OTI1E6
Applications: IHC, WB

Recommended Dilution: WB 1:200, IHC 1:150

Reactivity: Human
Host: Mouse
Isotype: IgG1

Clonality: Monoclonal

Immunogen: Full length human recombinant protein of human APOE (NP_000032) produced in HEK293T

cell.

Formulation: Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)

Reconstitution Method: For reconstitution, we recommend adding 100uL distilled water to a final antibody

concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific)

Purification: Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography

(protein A/G)

Conjugation: Unconjugated

Storage: Store at -20°C as received.

Stability: Stable for 12 months from date of receipt.

Predicted Protein Size: 34.2 kDa

Gene Name: apolipoprotein E

Database Link: NP 000032

Entrez Gene 348 Human

P02649

Background:

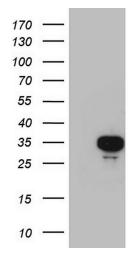

Chylomicron remnants and very low density lipoprotein (VLDL) remnants are rapidly removed from the circulation by receptor-mediated endocytosis in the liver. Apolipoprotein E, a main apoprotein of the chylomicron, binds to a specific receptor on liver cells and peripheral cells. ApoE is essential for the normal catabolism of triglyceride-rich lipoprotein constituents. The APOE gene is mapped to chromosome 19 in a cluster with APOC1 and APOC2. Defects in apolipoprotein E result in familial dysbetalipoproteinemia, or type III hyperlipoproteinemia (HLP III), in which increased plasma cholesterol and triglycerides are the consequence of impaired clearance of chylomicron and VLDL remnants. [provided by RefSeq, Jul 2008]

Synonyms: AD2; APO-E; LDLCQ5; LPG

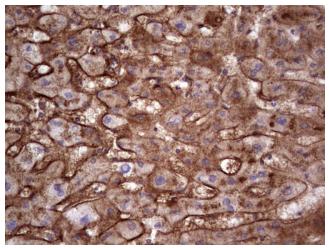

Protein Families: Adult stem cells, Druggable Genome, Secreted Protein, Stem cell - Pluripotency

Protein Pathways: Alzheimer's disease

Product images:

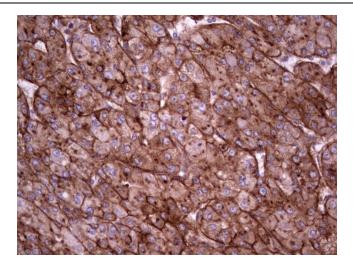

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY APOE ([RC200395], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-APOE. Positive lysates [LY424959] (100ug) and [LC424959] (20ug) can be purchased separately from OriGene.

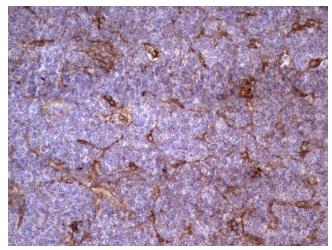

Immunohistochemical staining of paraffinembedded Human liver tissue within the normal limits using anti-APOE mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.

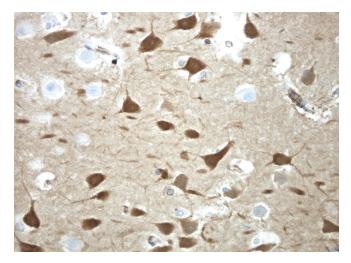

Immunohistochemical staining of paraffinembedded Carcinoma of Human liver tissue using anti-APOE mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.

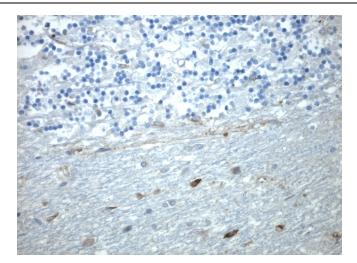

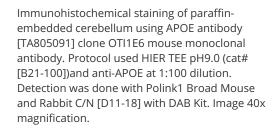

Immunohistochemical staining of paraffinembedded Human lymphoma tissue using anti-APOE mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.

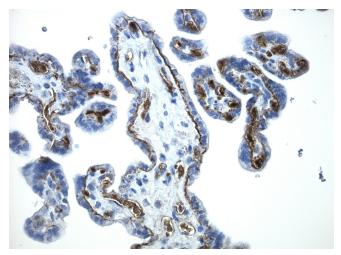

Immunohistochemical staining of paraffinembedded normal brain using APOE antibody [TA805091] clone OTI1E6 mouse monoclonal antibody. Protocol used HIER TEE pH9.0 (cat# [B21-100])and anti-APOE at 1:100 dilution. Detection was done with Polink1 Broad Mouse and Rabbit C/N [D11-18] with DAB Kit. Image 40x magnification.

Immunohistochemical staining of paraffinembedded placenta using APOE antibody [TA805091] clone OTI1E6 mouse monoclonal antibody. Protocol used HIER TEE pH9.0 (cat# [B21-100])and anti-APOE at 1:100 dilution. Detection was done with Polink1 Broad Mouse and Rabbit C/N [D11-18] with DAB Kit. Image 40x magnification.
