	PROCR Mouse Monoclonal Antibody [Clone ID: OTI3E7] – CF805524
Background:	The protein encoded by this gene is a receptor for activated protein C, a serine protease activated by and involved in the blood coagulation pathway. The encoded protein is an N- glycosylated type I membrane protein that enhances the activation of protein C. Mutations in this gene have been associated with venous thromboembolism and myocardial infarction, as well as with late fetal loss during pregnancy. The encoded protein may also play a role in malarial infection and has been associated with cancer. [provided by RefSeq, Jul 2013]
Synonyms:	CCCA; CCD41; EPCR

Protein Families: Druggable Genome, ES Cell Differentiation/IPS, Transmembrane

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PROCR ([RC204858], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PROCR. Positive lysates [LY401925] (100ug) and [LC401925] (20ug) can be purchased separately from OriGene.
