GRIGENE galectin 9 (LGALS9) Mouse Monoclonal Antibody [Clone ID: OTI16B4] – CF805652

Background:

The galectins are a family of beta-galactoside-binding proteins implicated in modulating cellcell and cell-matrix interactions. The protein encoded by this gene is an S-type lectin. It is overexpressed in Hodgkin's disease tissue and might participate in the interaction between the H&RS cells with their surrounding cells and might thus play a role in the pathogenesis of this disease and/or its associated immunodeficiency. Multiple alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Jul 2008]

Synonyms: HUAT; LGALS9A

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LGALS9 ([RC210750], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LGALS9 (1:2000). Positive lysates [LY419406] (100ug) and [LC419406] (20ug) can be purchased separately from OriGene.
