	DUSP10 Mouse Monoclonal Antibody [Clone ID: OTI2E3] – CF806723
Background:	Dual specificity protein phosphatases inactivate their target kinases by dephosphorylating both the phosphoserine/threonine and phosphotyrosine residues. They negatively regulate members of the MAP kinase superfamily, which is associated with cellular proliferation and differentiation. Different members of this family of dual specificity phosphatases show distinct substrate specificities for MAP kinases, different tissue distribution and subcellular localization, and different modes of expression induction by extracellular stimuli. This gene product binds to and inactivates p38 and SAPK/JNK. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Apr 2014]
Synonyms:	МКР-5; МКР5
Protein Families:	Druggable Genome, Phosphatase
Protein Pathway	s: MAPK signaling pathway

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY DUSP10 ([RC206760], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DUSP10. Positive lysates [LY402107] (100ug) and [LC402107] (20ug) can be purchased separately from OriGene.
