**Background:**

This gene has been found to be recurrently rearranged in chromosomal translocation with two other genes - baculoviral IAP repeat-containing protein 3 (also known as apoptosis inhibitor 2) and immunoglobulin heavy chain locus - in mucosa-associated lymphoid tissue lymphomas. The protein encoded by this gene may play a role in NF-kappaB activation. Two alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq, Jul 2008]

**Synonyms:**

IMD12; MLT; MLT1

**Protein Families:**

Druggable Genome, Protease

**Protein Pathways:**

B cell receptor signaling pathway, T cell receptor signaling pathway

**Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MALT1 ([RC214639], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MALT1 (1:2000). Positive lysates [LY402030] (100ug) and [LC402030] (20ug) can be purchased separately from OriGene.
