# PODXL Mouse Monoclonal Antibody [Clone ID: OTI2C6] - CF807750Background:This gene encodes a member of the sialomucin protein family. The encoded protein was<br/>originally identified as an important component of glomerular podocytes. Podocytes are<br/>highly differentiated epithelial cells with interdigitating foot processes covering the outer<br/>aspect of the glomerular basement membrane. Other biological activities of the encoded<br/>protein include: binding in a membrane protein complex with Na+/H+ exchanger regulatory<br/>factor to intracellular cytoskeletal elements, playing a role in hematopoetic cell<br/>differentiation, and being expressed in vascular endothelium cells and binding to L-selectin.<br/>[provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY PODXL (Cat# [RC219976], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PODXL (Cat# [TA807750])(1:2000).
