# Product datasheet for CF807819

# PCDHGC5 Mouse Monoclonal Antibody [Clone ID: OTI2E1]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI2E1
Applications:	IHC, WB
Recommended Dilution:	WB 1:2000, IHC 1:150
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 35-258 of human PCDHGC5(NP_115783) produced in E.coli.
Formulation:	Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)
Reconstitution Method:	For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific)
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Gene Name:	protocadherin gamma subfamily C, 5
Database Link:	<u>NP_115783</u> <u>Entrez Gene 56097 Human</u> <u>Q9Y5F6</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### **CRIGENE** PCDHGC5 Mouse Monoclonal Antibody [Clone ID: OTI2E1] – CF807819

Background:This gene is a member of the protocadherin gamma gene cluster, one of three related<br/>clusters tandemly linked on chromosome five. These gene clusters have an immunoglobulin-<br/>like organization, suggesting that a novel mechanism may be involved in their regulation and<br/>expression. The gamma gene cluster includes 22 genes divided into 3 subfamilies. Subfamily<br/>A contains 12 genes, subfamily B contains 7 genes and 2 pseudogenes, and the more<br/>distantly related subfamily C contains 3 genes. The tandem array of 22 large, variable region<br/>exons are followed by a constant region, containing 3 exons shared by all genes in the cluster.<br/>Each variable region exon encodes the extracellular region, which includes 6 cadherin<br/>ectodomains and a transmembrane region. The constant region exons encode the common<br/>cytoplasmic region. These neural cadherin-like cell adhesion proteins most likely play a critical<br/>role in the establishment and function of specific cell-cell connections in the brain.<br/>Alternative splicing has been described for the gamma cluster genes. [provided by RefSeq, Jul

Synonyms: PCDH-GAMMA-C5

**Protein Families:** 

Transmembrane

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY PCDHGC5 (Cat# [RC211316], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PCDHGC5 (Cat# [TA807819])(1:2000). Positive lysates [LY410148] (100ug) and [LC410148] (20ug) can be purchased separately from OriGene.
