	CDC42 binding protein kinase alpha (CDC42BPA) Mouse Monoclonal Antibody [Clone ID: OTI12C12] – CF808221	
Background:	The protein encoded by this gene is a member of the Serine/Threonine protein kinase family.	
-	This kinase contains multiple functional domains. Its kinase domain is highly similar to that of	
	the myotonic dystronby protein kinase (DMPK). This kinase also contains a Rac interactive	

the myotonic dystrophy protein kinase (DMPK). This kinase also contains a Rac interactive binding (CRIB) domain, and has been shown to bind CDC42. It may function as a CDC42 downstream effector mediating CDC42 induced peripheral actin formation, and promoting cytoskeletal reorganization. Multiple alternatively spliced transcript variants have been described, and the full-length nature of two of them has been reported. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CDC42BPA ([RC222587], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CDC42BPA (1:500). Positive lysates [LY415030] (100ug) and [LC415030] (20ug) can be purchased separately from OriGene.
