	FGFBP1 Mouse Monoclonal Antibody [Clone ID: OTI7D5] – CF808314	
Background:	This gene encodes a secreted fibroblast growth factor carrier protein. The encoded protein plays a critical role in cell proliferation, differentiation and migration by binding to fibroblast growth factors and potentiating their biological effects on target cells. The encoded protein may also play a role in tumor growth as an angiogenic switch molecule, and expression of this gene has been associated with several types of cancer including pancreatic and colorectal adenocarcinoma. A pseudogene of this gene is also located on the short arm of chromosome 4. [provided by RefSeq, Nov 2011]	
Synonyms:	FGF-BP; FGF-BP1; FGFBP; FGFBP-1; HBP17	
Protein Families	: Secreted Protein

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY FGFBP1 ([RC200819], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-FGFBP1 (1:2000). Positive lysates [LY417486] (100ug) and [LC417486] (20ug) can be purchased separately from OriGene.
