CDC6 Mouse Monoclonal Antibody [Clone ID: OTI1A4] – CF808381

Background:The protein encoded by this gene is highly similar to Saccharomyces cerevisiae Cdc6, a
protein essential for the initiation of DNA replication. This protein functions as a regulator at
the early steps of DNA replication. It localizes in cell nucleus during cell cyle G1, but
translocates to the cytoplasm at the start of S phase. The subcellular translocation of this
protein during cell cyle is regulated through its phosphorylation by Cdks. Transcription of this
protein was reported to be regulated in response to mitogenic signals through transcriptional
control mechanism involving E2F proteins. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY CDC6 (Cat# [RC206814], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CDC6 (Cat# [TA808381])(1:500). Positive lysates [LY400502] (100ug) and [LC400502] (20ug) can be purchased separately from OriGene.
