Gemin 2 (GEMIN2) Mouse Monoclonal Antibody [Clone ID: OTI4C11] – CF808769

Background:This gene encodes one of the proteins found in the SMN complex, which consists of several
gemin proteins and the protein known as the survival of motor neuron protein. The SMN
complex is localized to a subnuclear compartment called gems (gemini of coiled bodies) and
is required for assembly of spliceosomal snRNPs and for pre-mRNA splicing. This protein
interacts directly with the survival of motor neuron protein and it is required for formation of
the SMN complex. A knockout mouse targeting the mouse homolog of this gene exhibited
disrupted snRNP assembly and motor neuron degeneration. [provided by RefSeq, Aug 2011]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY GEMIN2 (Cat# [RC211219], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-GEMIN2 (Cat# [TA808769])(1:2000). Positive lysates [LY418547] (100ug) and [LC418547] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (30ug per lane) from 4 cell lines lysates by using anti-Gemin 2 monoclonal antibody ([TA808769], 1:500).
